

residential tower - brentford

southern cross station - melbourne

bradford university

komodo dragon enclosure

practice profile:

David Dexter Associates is an innovative structural engineering practice offering services within the UK and internationally.

The aim of the practice is to develop elegant and efficient structural design solutions that respond appropriately to the architectural and building constraints.

Our team of engineers and technicians have a broad experience of all types of building covering traditional concrete and steel structures through to modern fabric membranes and ETFE technologies.

recent and current projects

- mixed use projects east London (commercial and residential)
- residential tower, Brentford, London
- commercial centre, Athens, Greece
- golf resort, Cyprus
- Southern Cross Station, Melbourne, Australia
- Bradford University entrance atria
- National Swimming Centre, Beijing
- Komodo Dragon enclosure, London

specialist engineering capability

- architectural engineering
- form finding and analysis of cable, membrane and ETFE structures
- long span steel structures
- specialist concrete design
